                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: Catalyzes the formation of 4-diphosphocytidy1-20-methy1-D-erythritol from CTP and 20-methy1-D-erythritol 4-phosphate (By similarity).

CATALYTIC ACTIVITY: CTP + 2-C-methy1-D-erythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospho)-2-C-methy1-D-erythritol.

PATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third ste SIMILARITY: BELONGS TO THE ISPD FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PHOSPHATE (BY SIMILARITY).

CATALYTIC ACCIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol.

PATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third step.

SIMILARITY: BELONGS TO THE ISPD PAMILY.

"Complete genome sequence of enterohemorrhagic Escherichia coli ol57:H7 and genomic comparison with a laboratory strain K-12.";

DNA Res. 8:11-22(2001)

-!- FUNCTION: Catalyzes the formation of 4-diphosphocytidyl-2C-methyl-Derythritol 4-phosphate.

-!- CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol.

-!- CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pfam; PF01128; IspD; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bacteriol. 185:2330-2337(2003)

PINCTION: Catalyzes the formation of 4-diphosphocytidyl-2C-methyl-D-crythritol from CTP and 2C-methyl-D-crythritol 4-phosphate (By similarity).

CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-crythritol 4-phosphate = CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-crythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-crythritol.

PATHWAY: Nonmevalomate terpenoid biosynthesis pathway; third stellar in SIMILARITY: BELONGS TO THE ISPD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cities requires a license agreement (Susend an email to license@isb-sib.ch).

(4-diphosphocytidyl-2C-methyl-D-erythritol synthase) (MEP
cytidylyltransferase) (MCT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    phosphate (By similarity).

CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol.

PATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third ste SIMILARITY: BELONGS TO THE ISPD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Catalyzes the formation of 4-diphosphocytidyl-2C-methyl-D-erythritol from CTP and 2C-methyl-D-erythritol 4-
                                                                                                                                          185

-!- CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate =
-i- diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol
-!- PATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third st
-!- SIMILARITY: BELONGS TO THE ISPD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28-FEB-2003 (Rel. 41, Created)

FUNCTION: CATALYZES THE FORMATION OF 4-DIPHOSPHOCYTIDYL-2C-
METHYL-D-ERYTHRITOL FROM CTP AND 2C-METHYL-D-ERYTHRITOL 4-
PHOSPHATE (BY SIMILARITY).
CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate =
CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol.
DATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third stel
PATHWAY: Mommevalonate terpenoid biosynthesis pathway; third stel
SIMILARITY: BELONGS TO THE ISPD FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: Catalyzes the formation of 4-diphosphocytidyl-2C-methyl-D-erythritol from CTP and 2C-methyl-D-erythritol 4-phosphate (By similarity).

CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospha)-2-C-methyl-D-erythritol.

PATHMAY: Nonmevalonate cerpenoid biosynthesis pathway; third step.

SIMILARITY: BELONGS TO THE ISPD FAMILY.
